DETAILED ACTION***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-30 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-22, 32-33 and 25-30 of copending Application No. 10/388871, respectively. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-22, 32-33 and 25-30 of copending Application No. 10/388871 anticipate claims 1-30 of the current application, and anticipation is epitome of obviousness. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2862

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 6, 11, 16, and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Sinclair (US Patent No. 6100696). Sinclair discloses the same invention (method and instrument) as claimed: An induction instrument comprising: a transmitter 16 for transmitting an electromagnetic signal into a layered formation adjacent a well bore (see Fig.5); a receiver (18, 20) for receiving a signal from the formation in response to the transmitted electromagnetic signal; and a processor for analyzing the received signal for determining from the received signal polarity indicative of a direction for a boundary between layers in the well bore (col.6 lines 1-5). Sinclair discloses frequencies of up to 200 KHz (claim 1) and resistivity data (see conductivity data, for example, col. 12, line 4).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 21, 26 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sinclair. Sinclair discloses substantially the same invention as claimed except for the instruction is contained in a computer readable medium. It well known in computer and electronic arts that instruction can be embedded onto a computer readable medium

Art Unit: 2862

for performing method steps according to the instruction. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Sinclair by embedding the instruction onto a computer readable medium for performing method steps discussed in the previous 102 paragraphs.
